

MAR 1 1955

Dear Dr. Morgan:

In Dr. Harris' recent monograph, and elsewhere, I have noticed some mention of your conclusions that several distinct products may be related to individual blood group genes. This matter is of immediate interest to our own work on gene-antigen and gene-enzyme relationships in microorganisms, and I would be indebted to you for reprints of any publications which develop this thesis.

Yours sincerely,

Joshua Lederberg  
Professor of Genetics
